1087	Bean - Runner	Italian Flat	Fabaceae	Phaseolus vulgaris	Harlyn D. Atawhai from Organic Foods Nelson	2026	Tender, flat pods, excellent for freezing or dry shell-out. Late producing, dies back in winter & re-sprout in spring, water over summer.

NELSON SEED LIBRARY 2026-27 CATALOGUE

nos.	Common Name	Variety	*Family*	*botanicial name*	Source	Year	Notes
1027	Bean - Runner	Scarlet Runners	Fabaceae	Pisum sativum var. macrocarpum	Valerie Madsen/Kaori Kobayasti	2025	Tee Pee grown
0875	Bean - Unknown	research needed	*Fabaceae*		Unknown	2025	Grow & record info.
1026	Bean - Unknown	White	Fabaceae	Unkown	Unknown	2025	Grow & record info.
1110	Beetroot	Cylindra	Amaranthaceae	Beta vulgaris	Kings Seeds - Organic	2025	Excellent for bottling pickling. The roots have a dark-red flesh typical sweet, earthy flavour. Roots keep well if stored appropriately cool, dark and dry.
1105	Beetroot	Detroit Dark Red	Amaranthaceae	Beta vulgaris	Kings Seeds - Organic	2025	A reliable & adaptable variety, globe shaped. Excellent flavour.
0975	Bergamot		*Lamiaceae*	*Monarda*	Nelson	2025	
1041	Broccoli	Chinese Gai Lan	Brassicaceae	Brassica oleracea var. alboglabra		2026	Resembles a cross between regular broccoli & kale, featuring long stalks & thick blue-green leaves rather than large florets.
1113	Broccoli	Romanesco	Brassicaceae	Brassica oleracea var.	Setha's Seeds Ltd	2025	Sow in trays in September prick out to 4cm spacing when true leaves appear. Transplant at 50cm diagonal spacing into fertile garden in direct sun.
1116	Broccoli	De Cicco	Brassicaceae	Brassica oleracea var.	Eco Seeds	2025	A multi-cut heirloom broccoli which traversed the world in the 1890's with Italian immigrants. One planting gives a long season of picking. Main heads measure 10-18cm diameter with prolific side shoots. Variable maturity means the main heads are also staggered so you don't get a glut of broccoli followed by none. Ideal for spring and autumn sowings. Leaves & stems are also very tasty when picking the side shoots. Best to pick often to insure the plants keep producing. Sow into trays in early August-September, or for a winter crop late January-March. Prick out to 4cm diagonal spacing when true leaves appear. Transplant into fertile soil at 40cm diagonal spacing.

0940	Corn	Hokianga Red & Yellow	*Poaceae*	*Zea mays*	Setha's Seeds	2025	gifted to Setha's from Joseph Land, who has been growing it in te Hokianga for many years. It has two colours & instead of being mixed on each cob, single cobs display completely red & yellow/orange hue. This is a first for us as growers to witness. It appears possible that the corn is in fact one of the first varieties of corn to be grown in NZ by the name Marigold. Many older varities of marigolds contain the two-tone colours of red & yellow just like this corn. By 1826, bartering included maize in the Hokianga. Avery tall flour corn with minimal tillers that ripens late in the season. Can be eaten as a sweet corn when very young or left to dry for flour.
0772	Corn	Golden Bantam - Probably	*Poaceae*	*Zea mays*	Nelson	2017-18	CORN PROJECT 2024-25 RESEARCH REQUIRED Please contact NSL for more information , Compare with NSL#0771

nos.	Common Name	Variety	*Family*	*botanicial name*	Source	Year	Notes
1089	Corn - Flint	Rainbow or Glass Gem	Poaceae	Zea mays	Ginko 7 Farm	2026	A striking heirloom flint corn famous for its translucent, multi-colored kernels that resemble shiny glass beads. Can be ground into flour or used whole as a popping corn. 105-120 days to maturity.
1096	Corn - Flint	Unkown	Poaceae	Zea mays	English Language Partners, Victory Community Garden, Nelson	2026	Small, matte, creamy white, kernals, small/medim cobb size
0776	Corn - Flint / Flour	Blue Hopi	*Poaceae*	*Zea mays*	Nelson	?	CORN PROJECT 2024-25 Please contact NSL for more information The Hopi people inhabit Arizona in USA, this corn has been grown by them for generations. When the scare of GMOs first hit in the 90's this corn was brought into New Zealand to keep it GMO free. This is a flour or maize corn grown to make flour for bread, tortilla, or polenta. It will grow over your head in the garden and produce large cobs full of robust kernels for grinding into beautiful flour. Growing flour corn is a great way to start lessening dependence on industrial grains. Sow into trays in October in areas where there is frost, to 4cm diagonal spacing and keep in glasshouse . Transplant out to 25cm diagonal spacing in garden bed in November-December taking care to protect from frost. Or direct sow at 10-20cm spacing in October-November taking care to protect from frost. A heavy feeder, will require fertile soil.
0403	Corn - flint & popping	Glass Gem	*Poaceae*	*Zea mays*	Alice le Brun	2019	Translucent kernals, 3-8 inch ears, little morsels when popped, 9 ft in high
1122	Corn - Maize	Blue Hopi	Poaceae	Zea mays	Mani P. - Appleby		A flour or maize corn grown to make flour for bread, tortilla, or polenta.
1037	Corn - Maize	Hopi Blue	Poaceae	Zea mays	Louis and Nina, Wakefield	2026	1.8 - 2m high, 1-2 ears/plant + smaller fillers. Can support runner beans. Medium season

nos.	Common Name	Variety	*Family*	*botanicial name*	Source	Year	Notes
1125	Cucumber	Lebanese	*Curcurbitaceae*	*Cucumis sativus*	Nile St	2026	
1107	Cucumber	Marketmore	Curcurbitaceae	Cucumis sativus	Kings Seeds - Organic	2025	Crisp, cylindrical fruit averaging 15cm. Grow up trellis or along ground. Prompt harvest of first fruit will encourage vines to produce more fruit. Skin is non bitter but better to be peeled.
1111	Cucumber	Tendergreen	Curcurbitaceae	Cucumis sativus	Setha's Seeds Ltd	2025	A non-hybridized “Lebanese” type cucumber, open pollinated variety claimed to be over 80 years old. The history of this variety is not documented well, but it is an older open pollinated variety with great flavour & disease resistance to powdery & downy mildew as well as cucumber mosaic virus. A prolific producer of 17-22cm thin green skinned fruit with few seeds. Also known as a “burpless” cucumber as it is easier to digest then some other varieties. Great for fresh eating, can also be pickled.
1003	Dill	Unknown	Apiaceae	Anethum gravelens	Jen Germano Toi Toi	2026	
1127	Echinacea		*Asteraceae*	*Echinacea purpurea*	Jen G, Toi Toi	2024

1098	Gourd - Calabash	Sicilian Snake, Tenerumi	Curcurbitaceae	Lagenaria siceraria	Maitai, Nelson	2026	Eaten young like zuchini, edible leaves & young shoots. Fruit can be eaten at 20-30cm long and can grow to 1m. Loved by Sicilians because leaves are edible. Leaves also known to repel & kill whiteflies. Sow indoors October, transplant November or sow directly in November or December.
1099	Gourd - Hue	Ngāpuhi / AKA	Curcurbitaceae	Lagenaria siceraria	Maitai, Nelson, Previous Kōanga Seeds	2026	May have crossed with Sicilian Snake Gourd

nos.	Common Name	Variety	*Family*	*botanicial name*	Source	Year	Notes
1112	Gourd - Hue	Ruka	Curcurbitaceae	Lagenaria siceraria	Setha's Seeds Ltd	2025	Gourds have a long history in this land as they have been cultivated by Maori since their arrival. Hue, the Maori word for gourd, were prized in the absence of pottery and they were used as vessels that held most of their food and water. This variety comes from Loiuse Shaw of Ngāpuhi iwi. With a light sanding and beeswax coating, they can be further preserved for long lasting additions to the kitchen. Need a long growing season. Sow seeds indoors in early spring & pick out to 6cm spacing & transplant out at 50cm spacings after danger of frost. For longer necks grow on trellis, for flat bottom vessels provide a flat growing surface in the field. Best curing is on the plant but can be moved from the field once the plant has died back. Air movement is key to proper curing & is best done outdoors on in a vented glasshouse. Do not cut gourds until after the curing process.
1021	Hollyhock	Deep Red (Burgundy)	Malvaceae	Alcea rosea	W.Gdns	2025	Tall, flowering plant in the mallow family with large, showy blooms on towering spikes. Flowers, leaves, young buds, & roots can all be consumed safely. Plant has medicinal properties similar to mellow.

1095	Kamokamo	Un-known	Curcurbitaceae	Cucurbita pipo	Willy & Rewa, Kōhatu	2026	Kamokamo also known as Kumikumi was introduced to Aotearoa by European settlers in the late 1800's to early 1900's. It is likely that several different varieties were introduced during that period as the shape of kamokamo varies from long to round fruit. Eaten when young much like courgette or roasted like pumpkin as they mature. Traditionally, the very mature fruit were also used much like hue as a vessel for storage. Sow into trays in September/October. Prick out to 4cm diagonal spacing when true leaves appear. Transplant into fertile soil at 50cm diagonal spacing when chance of frost has passed.
